DISTINCTIVE WARMTH

Wood look finishes redefine the streetscape

Our faux wood finishes enhance exterior lighting designs with their own special warmth. Authentic woodgrain patterns provide a realistic and compelling textured look to our poles.

Poles enhanced

The technology used to decorate aluminum surfaces involves the chemical-physical process of sublimation.

Aluminum poles are first powder coated and then decorated with a heat-transfer film printed with special inks. This process creates decorative finishes that replicate natural materials like woodgrain.

OUR WOOD PAINT FINISHES ARE AVAILABLE FOR:

+ Steel and aluminum 4” and 5” straight round poles up to 23 ft
+ Bollards and light column pole bases

STANDARD WOOD FINISH COLORS:

OFL
Oak Fine Line

KNP
Knotty Pine

TEK
Teak

CRY
European Cherry

NOTE: Actual colors may differ slightly from what you see here.
For accurate color samples, please contact the factory.

Standard Cyclone delivery times and limited wood paint finish warranty apply.
For more information, please consult Cyclone Lighting’s Website or call the factory.

THE PROCESS

Pre-treatment: The metal surface is thoroughly cleaned to optimize powder coat adhesion.

Powder coating: The powder is applied electrostatically and oven cured. This base coat provides strong protection against weather, corrosion, and abrasion.

Wood pattern application: The decorative wood pattern is applied using a heat-transfer film, vacuum-sealed, then heated in an oven. The heat and pressure transfer the pattern onto the powder coating. After a few minutes, the film is removed, revealing the decorative design.

Enhance your space with natural elegance

Poles with a woodgrain finish complement a wide range of Cyclone light fixtures. Browse our luminaire collection to discover the perfect match that seamlessly blends with this natural-looking finish.
